

# Volatile natural gas prices will affect Tampa Electric bills.

The Florida Public Service Commission (PSC) approved Tampa Electric's 2023 rates. Effective in January, the average commercial and industrial customer's monthly bill will increase between 8 percent and 12 percent, depending on usage. Even with the change, the bill would remain below the national average and among the lowest in Florida. This adjustment is the first of two steps. The company expects another increase in early 2023, to reflect uncollected fuel costs for 2022. The company is phasing in the increase to ease the transition and to reduce the impact on customer budgets.

## Fuel

Natural gas prices are three times higher than they were in 2020. We make no profit on this portion of your bill. Although we cannot control the global factors impacting fuel costs, we are making long-term investments to use the least amount of fuel possible by increasing efficiency at our power plants and expanding renewable energy with more solar projects.

## Continued investment in solar

We continue to invest in solar projects, contributing to a cleaner energy future and reducing our use of fuel to generate electricity. Solar power generation is expected to reduce fuel costs by about \$90 million in 2022 alone.

## Big Bend Modernization project

Our recently completed Big Bend Modernization project will save customers more than \$700 million over its life. Big Bend Unit 1 is the most efficient unit in Tampa Electric's fleet.
