

Illuminate Your World!

Smart, energy-efficient outdoor lighting for home, business and government.

Why Bright Choices? It's simple. There are no up-front costs. You lease the lighting and poles, and any additional costs can be rolled into the lease. We provide hassle-free maintenance and repair for the life of the lease.

The LED Advantage

Our premium LED fixtures produce bright, soft, daylight-like white light, ensuring natural color accuracy. Ideal for those pursuing LEED® certification, LEDs are perfect for security, car dealerships, theme parks and areas where true-to-life color is essential.

Save Energy and Money

LEDs use 30% to 60% less energy than high-intensity discharge (HID) lights like high-pressure sodium (HPS) and metal halide (MH). Additionally, LEDs require less maintenance, further increasing overall savings.

High Performance

LEDs capture authentic colors at night, ideal for car dealerships and security lighting. They achieve full brightness instantly, offer precise control over lighting patterns, and last over 50,000 hours, compared to 30,000 hours for HPS and 7,000 hours for MH.

Smart Services

We offer several upgrades that can enhance your lighting system and property with the latest smart technology and options including solar lighting, network controls, security cameras, electric vehicle chargers and more.

Solar and Battery Storage

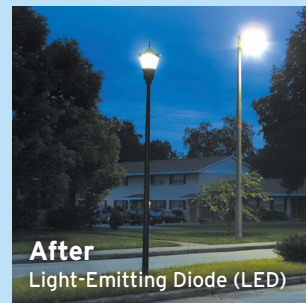

Store sunlight during the day so it can be used at night. Our solar lighting features battery storage to save energy and money. The lights operate in energy-saver mode and switch to full lighting when detecting movement. They are ideal for subdivisions, parks and parking lots.

If you have an existing outdoor lighting system that's due for an upgrade, leave it to us. We'll take over your existing system, upgrade it to LED and any other devices you want and package it into one easy-no payment down-lease.

Outdoor Lighting Solutions

Drawing on more than a century of expertise, our trained lighting technicians are ready to help you design, install and maintain a custom lighting solution designed to meet your unique needs.

Pick the
**PERFECT
FIXTURE**

Specialty LIGHT POLES

Our decorative poles are expertly designed to accommodate post-top lighting fixtures and other attachments. Some models even support banner displays, adding an extra touch of functionality and style. We can craft a custom lighting solution tailored specifically to your needs. Our team works directly with manufacturers to create unique and innovative designs, such as the Verreawood pole shown.

BOLLARD LIGHTS

Bollard with Light
44" out of ground

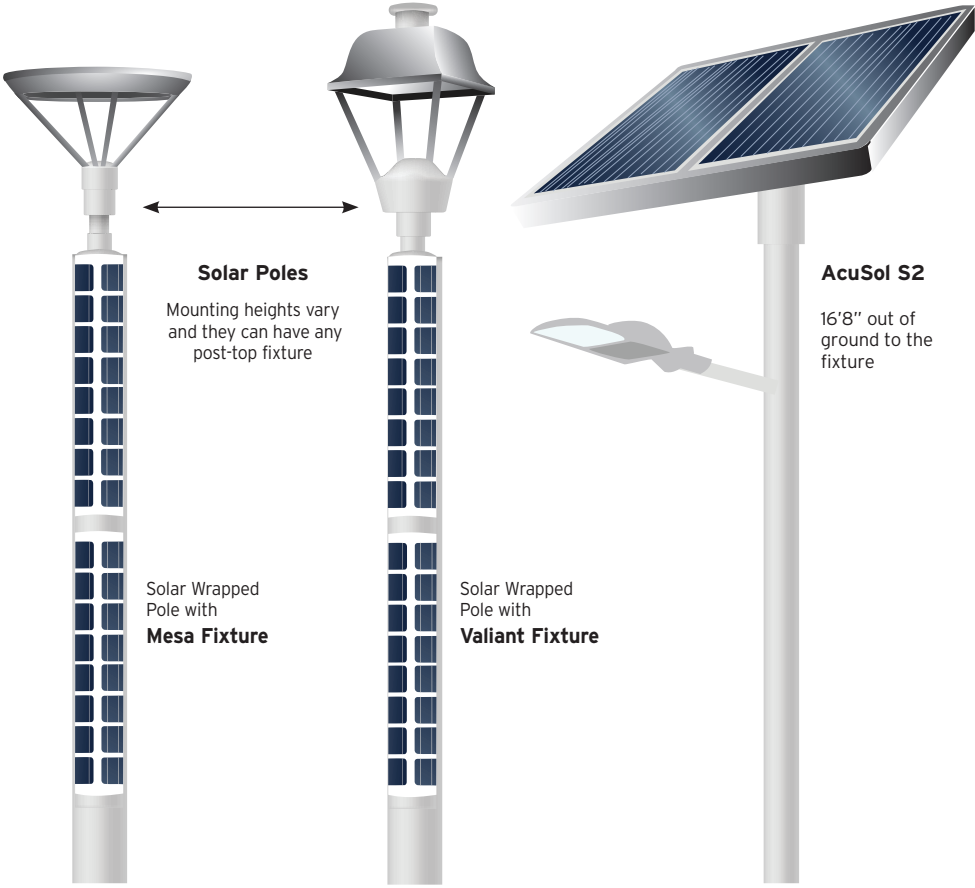

Bollard lights are perfect for illuminating pathways, walkways and driveways. Our variety of decorative bollards feature cutting-edge, energy-efficient LED technology. The stylish and durable bollards provide superior illumination and add an elegant touch to your landscape, pathways and public areas. With LED bollards, you can enjoy both aesthetic appeal and cost-effective, long-lasting performance.

SOLAR LIGHTS

Our solar lighting features battery storage and smart technology to save energy and money. These lights operate in energy-saver mode and switch to full-lighting when detecting movement. Ideal for subdivisions, parks and parking lots. Select from post top or traditional mounting options.

SECURITY CAMERAS

Our security cameras can be installed at any location and even integrated into new or existing lights. They can provide comprehensive 360-degree views with advanced pan, tilt and zoom capabilities to ensure thorough oversight and increased security. Artificial Intelligence functionality is also available. We can provide a video management system (VMS) or integrate cameras into your existing VMS. Data transport options are also available for backhaul and/or Wi-Fi provisioning.
